SALTS

The most common reason to add salt to a pool is to create a saline solution which through a process called saltwater chlorination, the salt is converted to chlorine which serves to sanitise your pool water, making it safe to swim in. This process requires a saltwater chlorinator to be installed as part of the pool equipment.

The same level of sanitation can be achieved by adding granular chlorine or liquid chlorine but the chlorinator automates this task to some extent. (Liquid chlorine feeders can also automate this process).

Types of pool salt

Super salt – 99% Sodium chloride + flocculant. It is a natural sea salt which dissolves fast. Clarifiers have been added to help maintain clear sparkling water. It is recommended to use Super Salt when you need to increase salt levels and clear slightly cloudy water. Once your water is clear, continue to use Hy-Clor Premium Pool Salt.

Mag salt – 95% Magnesium chloride. Used in conjunction with regular pool salt (like Ultra Premium Pool Salt). It softens and smooths water making it friendlier to swimmers with sensitive skin. It also helps to keep water clearer as magnesium adds a natural flocculant.

Evo Mineral – Rich blend of Mineral Salts (Magnesium Sulfate and Potassium Chloride) which soften and smooth pool water for a more natural healthy feel. Helps reduce the need for clarifiers and algaecides, aids filtration and softens scale build-up on pool surfaces. It is used in conjunction with regular pool salt.

Types of spa/bath salts

Spa Sport – Sport can help transform your Spa into a mineral-rich pre or post-workout recovery. The Magnesium Sulphate and Menthol infused salts used in conjunction with warm water and jets in your spa help create the perfect post-work soak. Spa Sport can be used in your Spa or Bath to help relieve muscle tension, reduce inflammation that causes pain and to have a beneficial effect on muscle soreness and recovery after a long, hard work out.

Spa Refresh – Spa Refresh adds magnesium eucalyptus & spearmint to your spa or bath water. The combination leaves you relaxed, refreshed and invigorated. When added to a warm Spa or Bath, the skin and body are replenished of magnesium helping promote calmness, reduce anxiety, promote restful sleep and help relieve inflammation and pain. In aromatherapy eucalyptus & spearmint are often used to help ease fatigue, headaches and nervousness.

Spa Relax – SPA Relax aids calming and sleep due to its blend of lavender and magnesium. It replenishes the skin and body magnesium which helps reduce anxiety and promote calmness. The lavender promotes restful sleep and helps relieve inflammation and pain.
