HY·CLOR

WATER TESTING

TEST

Testing your pool or spa water is easy and fast and saves you money. It lets you know exactly what's going on with your water enabling you to quickly address any areas that need correcting. It also saves you money and time, as you won't add unnecessary chemicals.

When it comes to pool care, prevention is always easier and cheaper than cure!

How to test.

1 Take a water sample, away from the edge, at about elbow depth. Free test vials are available in the pool isle at Bunnings.

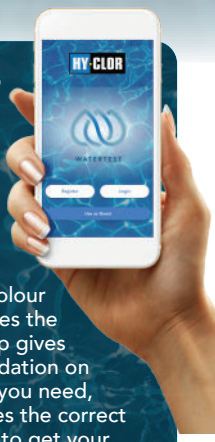

2 Dip a test strip into the water sample for 2 seconds and remove. (4 in 1 and salt test strips are available for free, for use at the water testing kiosk). Bottles of test strips are also available to purpose for home use. Hold the test strip still for 15 seconds (do not shake it). The colours on the test strip will develop.

3 Compare the test strip colours to the back of the test strip bottle (or to the colours on the water testing kiosk in Bunnings or to the colours on the Hy-Clor mobile app)

The Hy-Clor mobile app is another great tool that makes testing even easier.

By tapping the colour block that matches the test strip, the app gives you a recommendation on which chemicals you need, and even provides the correct dosage required to get your water back in balance. No spending money on chemicals you don't need.
